Enrichment Activity 5

Geographic Challenges

Use with Chapter 5.

● Many kinds of natural resources and climate zones can be found in the United States and Canada. Explain how the following people use the natural resources and have adapted to the climates that they have found in United States and Canada.

1. The Inuit in northern Canada

2. Residents of British Columbia's Pacific coast

3. Residents of the American Southwest

4. Texans living along the Gulf of Mexico

5. People living on the Great Plains

6. Residents of New York City

7. Residents of Quebec near the St. Lawrence River

Areas in the Western United States Affected by Acid Rain

Use with Chapter 7.

Recent studies show that acid rain is a problem in the western part of the United States. Many national parks are threatened by damage from acid rain. The sensitive areas shown on the map are regions where the soils are less able to weaken the effects of acid rain. Therefore, it takes less acid rain to cause damage to these areas. The air pollution causing the acid rain in this part of the country comes mostly from transportation and refining industry emissions. Use the map to answer the questions that follow. Write the answer to each question in the blank provided.

1. Which states in the western part of the United States receive acid rain?

2. Which state does not have areas sensitive to acid rain? _____
3. Which national parks are in or very near areas sensitive to acid rain? _____
4. What does this map tell you about the future of the national parks in the western part of the United States? _____
